

Guidelines for Video Recording of HW#5

I. Requirement

(You don't need a voice over for your video)

(a) At the start of the recording, you need to show the Windows Product ID along with your emulator.

- For Windows 10, you can get the Product ID information from - > Control Panel\System and Security\System, under Windows activation
- For Windows 7, you can get the Product ID information from "Control Panel\All Control Panel Items\System". (see Figure 1).
- For Windows XP, the identity information can be found by displaying the System Properties screen (see Figure 2).
- For MacOS, select "Apple - About This Mac" (see Figure 4), click "System report" to see Serial Number and Hardware UUID (see Figure 5).
- If you are directly using Linux and not hosting on Windows, then you can run the 'hostnamectl' command on the terminal. Set the host name as your name.

(b) The video must contain continuous manipulation of the exercise that demonstrates your solution, which means you must not use any video tool to cut-and-paste your video clips.

(c) A YouTube account is required for uploading your video for grading.

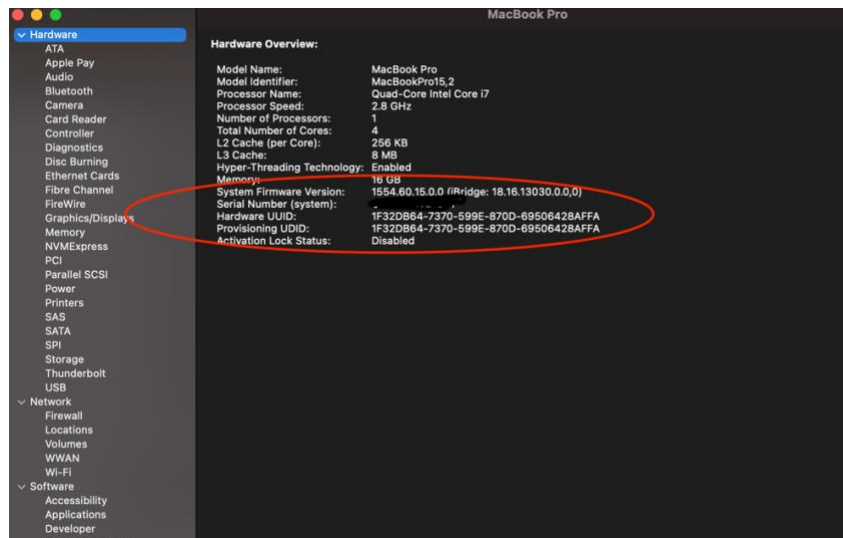

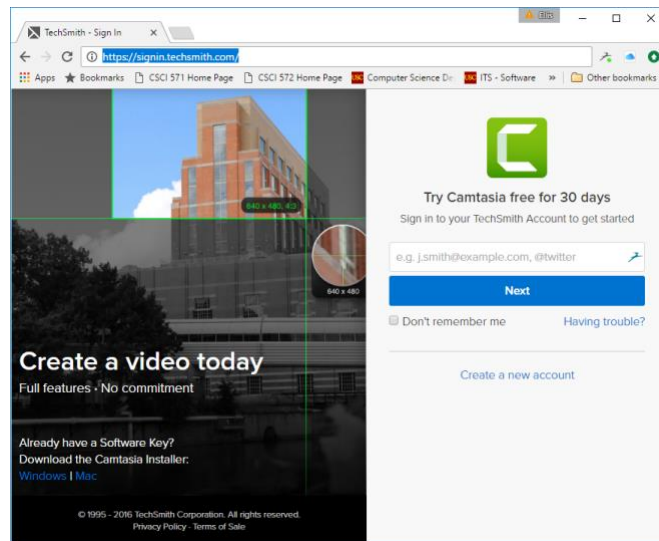

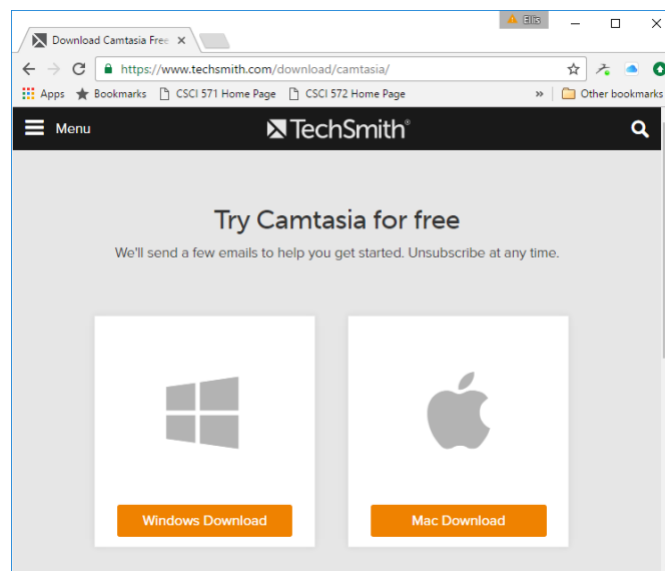

Figure 5 OS Identity (For MacOS)

To complete homework #5, students will need to make a video. You will be sent a script containing a set of tasks we wish you to run. Using a screen capture program you should run the script, capture your program and then post the resulting video to YouTube. You are welcome to use any screen video capture program you wish. Here is one possibility.

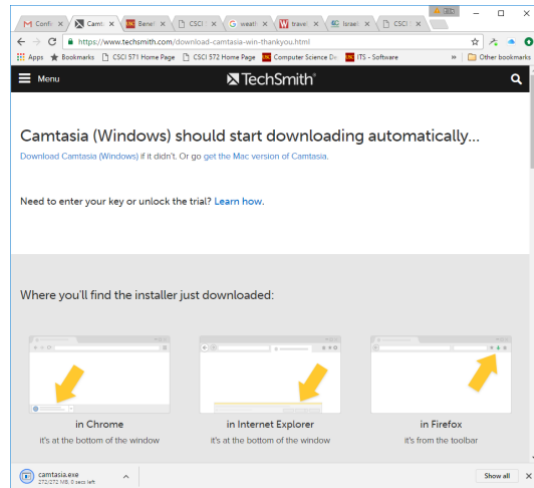

- go to <https://signin.techsmith.com/>
- create an account
- then locate Camtasia and start a free trial

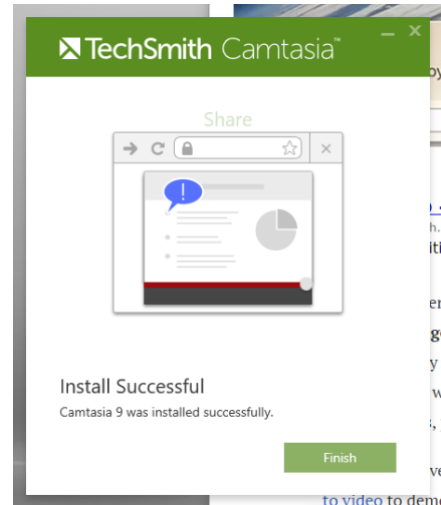

Camtasia runs on both Windows and Macs, so choose the appropriate platform

I chose the windows download option

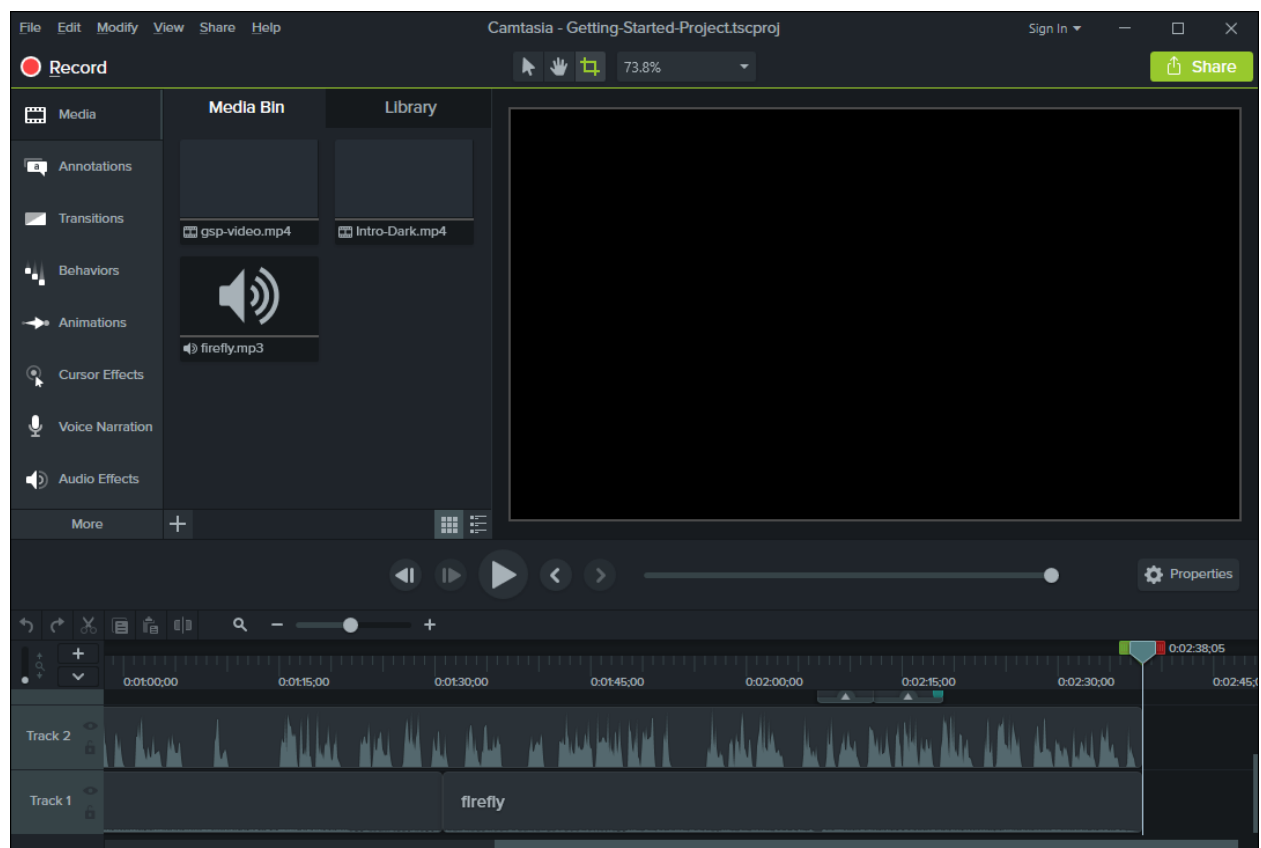

Starting the Download

Download is Complete

Below is the initial screen.

If you are using Linux, please check the **Simple Screen Recorder** application at this [link](#).
If you are using MacOS, another way to record screen is to use Shift-Command-5. Please refer to this [link](#) for more detail.

Uploading to YouTube

For submitting your video, you have to login to your YouTube account. If you do not have one, you have to sign up for one by using your email account. After you log in, click Upload on the right upper corner of the webpage. Then, an upload page appears. Choose the file you just recorded and upload it to the YouTube website. After successful upload, you can click the video in *MyVideos* and copy the URL path for grading
